parameter to SQL statement based on cell value I have a workbook and multiple users working on the same workbook (with copy protection turned off). I have several sheets in the workbook that will get added to a data dictionary sheet that will be accessible by all users through a VBA macro. I've been asked to make the subroutines that access the data dictionary sheet much more

robust so they are more user friendly. One requirement is that the user will be able to determine how many columns there are, and based on this number, they will add a parameter to the SQL statement. For example, the user types in 5, the database will then run 5 * SQL statement instead of one SQL statement with multiple criteria. I have a sample and I've been trying to

figure this out for several days
but nothing I've tried has
worked or made sense. The
subroutine I'm asking for help
with is in "MainDdiaSub" from
the macro below. Option
Explicit Public Sub
MainDdiaSub() Dim
rngToCopy As Range Dim db
As DAO.Database Dim strSQL
As String Dim wksht As
Worksheet Dim currrow As
Long Dim flag As Integer Dim

i As Integer On Error Resume
Next currow = 1 " Make sure
the active sheet is the sheet we
will copy to from " The data
dictionary. Set wksht =
ActiveSheet ' Set up the
FindCell range for copy. Set
rngToCopy =
wksht.Range("P:P") " Build the
SQL string. For i = 0 To
rngToCopy.Rows.Count - 1
strSQL = "SELECT * FROM "
& rngToCopy.Rows(i).Cells(1)

& " " & "WHERE " strSQL =
strSQL & " IS NOT NULL" '
